# CALENDAR

15-18 December 1980

**Resources policy modelling**
*Gesher Haziv, Israel*
Prof Mordecia Avriel, Faculty of Industrial Engineering and Management, Technion-Israel Institute of Technology, Haifa 32000, Israel

24-26 March 1981

**Engineering software: second international conference and exhibition**
*London, UK*
Dr R. Adey, ENGSOFT, 125 High Street, Southampton SO1 0AA, UK

30 April-1 May 1981

**Modelling and simulation**
*Pittsburgh, Pennsylvania, USA*
W. G. Vogt, Modelling and Simulation Conference, 348 Benedum Engineering Hall, University of Pittsburgh, Pittsburgh, Pennsylvania 15261, USA

2-4 June 1981

**Advanced mechanics of reinforced concrete**
*Delft, The Netherlands*
IABSE Secretariat, ETH-Hönggerberg. CH-8093 Zurich, Switzerland

7-9 July 1981

**Recent advances in boundary element methods**
*Irvine, California, USA*
Dr C. A. Brebbia, Seminar Director, Department of Civil Engineering, University of Southampton, Southampton SO9 5NH, UK

7-10 July 1981

**Numerical methods in thermal problems**
*Venice, Italy*
Dr C. Taylor, Department of Civil Engineering, University College, Swansea SA2 8PP, UK

13-16 July 1981

**Numerical methods in laminar and turbulent flow**
*Venice, Italy*
Dr C. Taylor, Department of Civil Engineering, University College, Swansea SA2 8PP, UK

15-17 July 1981

**Summar computer simulation conference**
*Washington, DC*
Dr L. G. Culhane, 1981 SCSC Program Co-Chairman, The MITRE Corporation, 1820 Dolley Madison Boulevard, McLean, Virginia 22102, USA

Mathematical Modelling of Turbulent Diffusion in the Environment

**edited by C.J. Harris**
*1979, xvi + 500pp., £18.00 (UK only) / $41.50, 0.12.328350.7*

A fundamental problem confronting all engineers, mathematicians and scientists who are attempting to understand and predict the dispersion and mixing of pollutants in the environment is that of modelling turbulent diffusion. This book is a collection of the papers given at the 1978 Conference of the Institute of Mathematics and its Applications. The conference was entitled *'Mathematical Modelling of Turbulent Diffusion in the Environment'* and the papers presented describe current trends in this area. They are the views and accounts of some of the leading experts in the UK in turbulent diffusion modelling. The text embraces papers on techniques of modelling for turbulent diffusion, air pollution and atmospheric diffusion, mixing processes in estuaries and coastal waters, and water pollution modelling and control. Most papers summarize and compare other important work in their field and offer critical studies of them, presenting also the theoretical and practical problems encountered in the building and uses of dynamic models. A unique feature of the book is that it is the first to describe the application and development of the diffusion equation for environmental pollution modelling and control. It is the most thorough collection of current literature in the field and contains fully comprehensive bibliographies.

**Academic Press**
*A Subsidiary of Harcourt Brace Jovanovich, Publishers*
London New York Toronto Syndey San Francisco
24-28 Oval Road, London NW1 7DX, England
111 Fifth Avenue, New York, NY 10003, USA

Reprints of all articles in this journal are available in quantities of 100 or more

**Reprints are essential –**

- for the company that wants to distribute impartial comment on its activities to potential customers and clients
- for the company that wants to up-date its technical staff on new techniques and new technologies
